

SAP Business One Integration

Why SAP Business One?

Many small and medium businesses rely on basic entry-level accounting software and spreadsheets that fail to provide the enterprise-wide visibility needed to help retailers and restaurant businesses grow.

With SAP Business One, retailers can make informed decisions, based on real-time data, and act on it within a single integrated system.

Retailers and restaurant owners can place purchase orders, check stock, sell products and perform crucial retail operations all within one single system with SAP Business One. Far more than just accounting tools, SAP Business One gives retailers greater control over their business processes with a single, scalable system.

iVend Retail and SAP Business One

iVend Retail paired with SAP Business One provides an end-to-end, omnichannel retail management solution that covers everything from POS to back office to head office operations. An iVend Retail setup can range from a single outlet to a multi-geography store environment, with complete integration of day-to-day operations.

Together, iVend Retail and SAP Business One help retailers grow their customer base and increase profits by moving to a single, real-time platform. Gain insights into customer behavior; anticipate demand; manage inventory; and deliver personalized, omnichannel offers and services – wherever customers choose to engage.
